EXPERIENCE

Software Developer Intern

February 2026 - April 2026

Denso Ten Solutions Philippines Corporation | Ortigas, Pasig City

- **Process Automation & Optimization:** Streamlined internal engineering operations by developing automated data-gathering tools, successfully eliminating manual data entry redundancies and significantly reducing weekly processing man-hours.
- **Web & Database Tooling:** Engineered local web-based applications integrated with centralized databases to accelerate technical workflows (including Stack Output Analysis and Defects Gathering).
- **Enterprise Dashboards:** Designed and deployed interactive tracking systems utilizing Microsoft Power Apps and Power BI to centralize timekeeping and monitor embedded skills for management.

PROJECTS

FOVB-AIoT: Four-in-One Vital Sign Sensor with BMI Calculation

August 2025 - March 2026

(Project Manager & Lead Developer)

- **Lead AI Developer:** Built a smart health kiosk integrating Arduino IoT sensors and computer vision (TensorFlow/YOLO) to capture and process real-time patient vital signs.
- **Designed a Cross-Validated AI Architecture:** Engineered a "Multi-AI Risk Score" system utilizing XGBoost as the primary predictive model, validated by Gemini 2.0 Flash and Groq APIs to mitigate AI hallucinations and enforce clinical accuracy.
- **Developed a Scalable Web Dashboard:** Built a React.js and Python (REST API) frontend for live data visualization, utilizing a dynamic MySQL database configuration for flexible deployment environments.

Smart AI Kilo Bot: Intelligent Weighing and Pricing System

November 2025 - December 2025

(Web Developer)

- **Developed an IoT Web Dashboard:** Built a real-time frontend interface for an automated weighing solution, providing instant weight and pricing visualizations to accelerate transaction speeds in fast-paced marketplaces.
- **Engineered Hardware-to-Software Synchronization:** Integrated Arduino load cell sensors with a Python backend, creating a low-latency data pipeline that instantly computes and displays accurate pricing based on live weight data.

Smart Locker System

April 2025 - May 2025

(Project Manager & Software Developer)

- **Project Management:** Directed the end-to-end lifecycle of a smart locker prototype, managing system requirements, hardware procurement, and successful software integration within a rapid two-month deadline.
- **Software Engineering:** Developed a secure Python-based control application, building a custom GUI for PIN authentication and programming the backend logic to automate the physical Raspberry Pi electronic locks.

CureSecure: Pharmacy POS & Inventory System (C# WinForms)

January 2023 - April 2023

- **Lead Programmer:** Architected and developed a comprehensive desktop POS application, optimizing the speed and accuracy of daily pharmacy transactions and operations.
- **Systems Engineering:** Engineered a real-time MySQL inventory management system featuring automated restock alerts to prevent stockouts, alongside secure role-based access control (RBAC) for staff data protection.

TECHNICAL SKILLS

Frontend: HTML, CSS, JavaScript, React.js, Bootstrap, Tailwind

Backend Development: Flask, PHP, REST API, Node.js, Electron

AI / Machine Learning: TensorFlow, Deep Learning, XGBoost, YOLO (Object Detection), OpenCV

Databases: MySQL, SQL, SQLite

DevOps: Linux, Git, GitHub, Vercel, Docker

IoT: Arduino, Raspberry Pi, ESP32

EDUCATION

Bachelor of Science in Computer Engineering (BSCpE)

August 2022 - Present

Rizal Technological University- Pasig City
